

LEAF SENTRY

GUTTER PROTECTION SYSTEM

TECHNICAL DATA

Fits 5" & 6" K-Style & Half Round Gutters

Produced using:

- .024-gauge recycled aluminum
- Convenient 4-foot lengths
- 100 feet per box with 100 matching stainless steel zip screws
- Baked-on polyester, low-gloss paint
- 16 colors and 16-ounce copper

Additional System Features

- Inter-locking panels
- Pre-made endcaps
- Pre-made inside miters with built-in diverter/splash guard
- High-water flow panels: perforated to handle concentrated, high volumes of rainwater such as first-story gutter below a second-story downspout. Also can be used on inside valley, metal and tile roofs
- Reverse hem for added strength and to prevent wicking under the shingle
- Two water-entry points

Warranty

- Lifetime Performance and Material Guarantee
- Weather resistant; no corrosion
- Water volume capacity: 16" of rainwater per hour

Installation

- Attaches to the lip of the gutter with zip screws
- Goes under first row or starter row of shingles
- There are no clips, hangers or brackets used
- Does not attach or penetrate the roof
- Easily bends to adjust to all roof pitches

LEAF SENTRY

GUTTER PROTECTION SYSTEM

CARE AND MAINTENANCE

- During the manufacturing process, a thin layer of oil is added to the painted finish. This oil may cause minor runoff on a newly installed system. Natural weathering will break down the thin layer of oil in a short period of time.
- All products on the exterior of a home require maintenance. Windows and siding require cleaning and gutter covers are no exception. On occasion there may be a build-up of dirt on the front edge of the cover. This can easily be cleaned by spraying, using a hose with a high-pressure nozzle. In regions where tree resins are excessive, additional periodic cleaning may be necessary.
- Be aware of debris that is already resting on the roof or in roof valleys. This debris will continue to accumulate and may prevent the system from working properly. Clear those areas to ensure maximum performance.
- Replace damaged panels; don't try to repair them. Painting is not recommended and will void the warranty.
- Icicle formation is normal. The system helps reduce the build-up of ice and snow inside the gutter, resulting in icicle formation on the outside of the gutter.

GP Industries stands behind the products we manufacture and will not hesitate to assist with any questions or concerns.
